MOVE-DOWN – was never easier

Simplified handling for a thorough hygiene

With the updated MOVE-DOWN feature, cleaning the evaporator was never easier!

- The air cooler can be folded down smoothly with gas pressure springs
- Crumbs and other remains are collected in a removable tray for an easy disposal

This allows perfect hygiene without compromise.

Your benefit: The update is already included in all WIHA IMPULSE air chiller units.

Less effort for the daily cleaning with WIHA air chiller units.

High hygienic standards for the commercial sale of chilled food are vitally important. Regular cleaning must be easy and done within a minimum of time.

WIHA air chiller units, which are equipped with the new WIHA MOVE-DOWN feature, are particularly easy and quick to clean.

Additional gas pressure springs are used to compensate the weight of the evaporator to minimize the effort that is needed to fold them down for cleaning.

An additional removable tray is located underneath the evaporator, to catch crumbs and other remains to prevent them from blocking the drain.

The new WIHA MOVE-DOWN feature is now integrated in the following air chiller units of the series:

- Bäcker-Snack IMPULSE,
- Bäcker-Snack BG IMPULSE,
- Bäcker-Snack FLA 8° IMPULSE,
- Bäcker-Snack 8° IMPULSE,
- Bäcker-Snack 8° BG IMPULSE and
- SKE 120 SP IMPULSE

with the refrigerant R134a/R513A, R454C and R290.

Clean the air baffle within seconds

The air blow-off nozzle can be unfolded to access all areas for cleaning.

Simply wipe the pan bottom

The merchandise display shelf can be folded up easily, to allow the pan bottom to be cleaned.

Easy handling of the air cooler

The MOVE-DOWN feature allows the evaporator to be folded down.

New: Gas pressure springs compensate the weight of the air cooler and minimize the force to handle it.

Clean the evaporator easily

Use a hand brush to wipe the evaporator. Remains are caught by a removable tray underneath the evaporator for their easy disposal.

RED marked handles enable an easy handling.
